2021 Annual CCR Fugitive Dust Control Report**

Purpose

This memorandum fulfills the requirements of 40 CFR § 257.80(c) Annual CCR Fugitive Dust Control Report. The annual 2021 CCR site inspection was performed by Brad Sullivan, P.E. from Wenck (now part of Stantec), on October 29, 2021, which included the review of the CCR fugitive dust operations pursuant to the above referenced Rule.

Background and Applicability

SKB Environmental Cloquet Landfill Inc., f/n/a Shamrock Landfill, Inc. owns and operates the Shamrock Environmental Landfill which is a secure landfill permitted to accept industrial waste, including CCR waste. The facility is located at Section 25, Township 49 North, Range 17 West, Carlton County with a street address of 761 MN Highway 45 in Cloquet, Minnesota. The Facility is operated under the MPCA Solid Waste Permit SW-399. Currently, 36.1 acres of lined landfill are constructed. Most recently, the remaining portions of Phases 4 and 6 were constructed in 2021. All constructed phases, Phase 1 through 6, are permitted to accept CCR. Filling operations in 2021 were primarily in Phases 5 & 6, although Phases 1 through 4 remained operational and received some waste.

Fugitive Dust Control Measures

40 CFR § 257.84, Subpart b.2 requires the following topics in italics be addressed within this report. The Facility's CCR Fugitive Dust Control Plan identifies dust suppression by the following means:

- Application of water by a water truck or spray hose, or by sprinklers;
- Burial of the CCR at the landfill working face;
 - For CCR disposed at the working face that is susceptible to fugitive dust generation, the CCR will be maintained in a limited space, and covered with waste or soil in a timely manner; and
- Other suitable methods of dust suppression include the use of tarps, dust suppression agents, or temporary soil cover.

Based on a review of site operational records and discussions with site operators, the primary means of Fugitive Dust Control employed in 2021 was to bury the CCR materials at the landfill working face. Operational practices such as expedient placement of daily and operational soil cover limited the potential for generation of fugitive dust without the need for application of water or other conditioning agents. Fugitive dust emissions are monitored weekly by the site operators as part of the weekly CCR inspection to determine if the current operational practices are effective and appropriate.

During October 29, 2021, inspection, the above described operational practices were being employed and there was no noticeable fugitive dust.

Citizen Complaint Log

January 7, 2021

Geoff Strack

Reference: Shamrock Landfill, Inc. 2021 Annual CCR Fugitive Dust Control Report

No citizen complaints regarding CCR fugitive dust were received by the Facility in 2021.

Notification Requirements

Per § 257.80(d), the Shamrock Landfill is in compliance with the recordkeeping requirements specified in § 257.105(g), the notification requirements specified in § 257.106(g), and the internet requirements specified in § 257.107(g).

Conclusions and Recommendations

No corrective measures were identified in the previous Annual CCR Fugitive Dust Control Report or in the weekly facility inspections. The measures described in the Facility's CCR Fugitive Dust Control Plan are effective for controlling CCR fugitive dusts. Thus, there are no recommendations for additional or revised CCR dust management operations at this time.
